EXPERIENCE

Visa | Software Engineer, Visa Device Intelligence

Jan. 2026 - Present

- Helped build and maintain Visa's device-intelligence platform (VCDI), powering 20M+ monthly device-profiling requests.
- Designed an Onboarding REST API (Java, Spring Boot, PostgreSQL) that replaced a weeks-long, release-gated process.
- Engineered session deduplication saving 2+ seconds of browser latency cutting vendor calls 50%+ on shared transactions.
- Built a zero-data-loss key migration pipeline that decrypts and re-encrypts 8M+ records under a new key with checkpointing.
- Devised a self-healing AI multi-agent orchestration tool (Next.js, TypeScript, Claude), cutting incident-diagnosis time ~98%.
- Mentored a 5-person intern team building an AI fraud-detection layer, presented to senior leadership at regional finals.

applied (applied.com) | Software Engineer, Full Stack

Sep. 2024 - Jun. 2026

- Co-founded an AI-powered job platform using Next.js (TypeScript), Firebase, Python, and OpenAI API with GitHub Actions.
- Built an AI-driven resume parsing and intelligent tracking system, managing 1500+ applications for 60+ active users.
- Developed modular server components with Tailwind CSS and scalable backend architecture for edge-ready performance.
- Built and grew @applied's TikTok to 2,000+ followers through consistent daily content, driving organic user acquisition.

PACCAR | Software Engineer Intern

May 2025 - Aug. 2025

- Cut Lambda error resolution time by 86% (7 to 1 day) with CloudWatch logging, markdown parsing, and Lambda versioning.
- Built AWS serverless pipeline (Python, Terraform, LangChain-Bedrock LLMs), automating incident classification and triage.
- Integrated Jira REST API to auto-generate tickets from AI-classified errors for real-time monitoring and backlog tracking.
- Delivered features in Agile sprints using modular Lambda layers, CI/CD pipelines, and Terraform infrastructure automation.

Independent Pharmacy Cooperative (IPC Rx) | Software Engineer, Full Stack Lead

Sep. 2024 - May 2025

- Rebuilt IPC's platform as a cross-platform mobile app using .NET MAUI, modernizing UI/UX for 7,000+ pharmacies.
- Integrated backend services via Swagger/OpenAPI and built a real-time notification system with Firebase and OneSignal.
- Led sprint planning, stand-ups, and retrospectives as Scrum Master for a 5-member Agile team via Azure DevOps.

PROJECTS

HashiCorp terraform-provider-aws (open source contribution - [pull/49215](https://github.com/hashicorp/terraform-provider-aws/pull/49215))

Jul. 2026

- Added a missing model_lifecycle attribute to two AWS Bedrock data sources in HashiCorp's 11k-star terraform-provider-aws.
- Traced the gap to the AWS SDK for Go, then implemented the schema mapping, test coverage, and documentation.

Personal Website (austintso.com)

Mar. 2023 - Present

- Built a React portfolio with real-time crypto and stock tickers via a CORS-proxied Yahoo Finance API integration.
- Engineered slug-based blog routing (React Router) and a mobile-first, responsive UI with CSS keyframe animations.

Campas (private repository - [yourcampas](https://yourcampas.com))

Jun. 2026 - Present

- Built a full-stack college-matching platform pairing a Next.js/TypeScript frontend with a FastAPI backend service.
- Designed AI-driven fit scoring that parses free-text life descriptions into lifestyle and value signals across 100+ schools.
- Shipped Supabase auth and live reach/match/safety bucketing computed per student from questionnaire responses.

Zero-Fee Blockchain Transaction Independent Research ([zero-fee-blockchain-research](https://zero-fee-blockchain-research.com))

Aug. 2025 - Jan. 2026

- Implemented and tested two Solidity contract patterns for zero-fee transfers: a gasless relay and a batched settlement pool.
- Used EIP-712 signatures for off-chain authorization with on-chain replay and access control, backed by 11-test Hardhat suite.
- Benchmarked gas costs via Hardhat, finding batched settlement uses 15% more gas than direct transfers, not less.

EDUCATION

Gonzaga University

Aug. 2022 - Dec. 2025

Bachelor of Science in Computer Science, Software Security Concentration

- **Relevant Coursework:** Algorithms & Abstract Data Structures, Cryptography, Database Management Systems, Design & Analysis-Comp Algorithms, Discrete Structures, Machine Learning, Numerical Methods, Operating Systems, Software Development, Software Engineering, Speech & Natural Language Processing, Organization of Programming Languages
- **Activities:** People For & With Others LLC, Association for Computer Machinery, Investment Club, Asian American Union

SKILLS

- **Programming Languages:** Python, Java 17, TypeScript/JavaScript, SQL (PostgreSQL), HTML/CSS, Solidity
- **Frameworks & Libraries:** React, TensorFlow, .NET MAUI, Tailwind CSS, Spring Boot, LangChain, Kafka
- **Tools & Platforms:** AWS, Amazon Bedrock, GitHub Actions, Karate, LoadRunner, Docker, Terraform, Claude Code, Splunk
- **AI & Agentic Systems:** Multi-Agent Orchestration, LLM Design, Context Engineering, Claude Code Skill Development, MCP
